Instruction

In this practice session, we are going to practice using the HTML5 audio and video elements.

1. We've already done a bit of a setup for you by adding some scaffolding code for you. You have an audio and a video file in the folder. You can start working directly inside the body element.

2. Add a video element as shown below along with an h3 element.

```
<h3>Video - Let's enjoy a video!</h3>
<video>
  <source src="video.mp4" type="video/mp4">
  The HTML5 video cannot be played back on your browser.
  Please update.
</video>
```

3. Add the following attributes to the video element.

```
<video style="width: 50%;" autoplay controls loop>
  <source src="video.mp4" type="video/mp4">
  The HTML5 video cannot be played back on your browser.
  Please update.
</video>
```

4. Next, in a similar manner, add the audio element as shown below.

```
<h3>Audio - Here is something you'll enjoy!</h3>
```

```
<audio style="width: 50%;" controls loop>  
  <source src="audio.mp3" type="audio/mp3">  
</audio>
```

5. Done, final code should look like this.

```
<body>  
  <h3>Video - Let's enjoy a video!</h3>  
  <video style="width: 50%" autoplay controls loop>  
    <source src="video.mp4" type="video/mp4" />  
    The HTML5 video cannot be played back on your browser.  
Please update.  
  </video>  
  
  <h3>Audio - Here is something you'll enjoy!</h3>  
  
  <audio style="width: 50%" controls loop>  
    <source src="audio.mp3" type="audio/mp3" />  
  </audio>  
</body>
```
